Get The Best One For Your Regular Use

# 15 Years of experience in this business.

EME Elevators is a well-known elevator company.

EME elevator is a well-known brand in the UAE. Our company is highly expert in their field. We are working with quality and uniqueness. The company is serving for eight years. Our team experts are highly professional. We are working business to business and business to the client. EME giving Quality elevators, Because EME is importing elevators from America, Italy, Germany, and turkey. 100% we are providing unique technology to our clients.

Our aim to introduce something unique in the market that meets the customer's interest. In the middle east, we are providing quality services with quality products. Most people get a direct relationship between quality and price. Like if they pay high then they will able to get quality elevator products. If they pay low they will get a low-quality product. But Easy move removed this error by using new technology at affordable rates. Customer convenience is always our first priority. We want to work for customer satisfaction and built good terms with our clients. For our different valued customers, Company has a huge choice of designs colors, shapes ad size.

# Innovation, Quality —

Aiming to be a world-class company, we will strive to meet and exceed our customers' ever-increasing expectations. We will continually improve our product quality and customer service, and we will have a positive impact on our working and living environments.

## COMPANY SPIRIT

Only through hard work can one pave the way for a new beginning.

## CORE VALUE

Integrity, dedication, innovation, and teamwork are all important characteristics.

## MANAGEMENT CONCEPTION

Management with integrity, continuous improvement, and service to the community

## SERVICE CONCEPTION

Make every attempt to improve the quality of service you deliver.

## QUALITY PRINCIPLE

Optimism Do your best to reach excellence. This is a win-win scenario.

# Products

- Cabin Design
- Panoramic lift
- Hotel lift.
- Building lift
- Hospital lift.
- Home lift
- Round lift
- Vacuum lift
- Construction hoist lift.
- cargo/material lift
- Dumbwaiter
- car lift.
- Escalator

## Types of Elevator:

- Machine room less (MRL)
- Machine room (MR)
- Hydraulic

# Passenger Lift

Elevators are used to move from the ground floor to the high floor or high floor to downward. As the lift is mostly equipped in homes or shopping malls the same as the passenger elevator lift is very useful for passengers. The tired passenger never uses the stairs in that situation. Passenger lift is the best option. Passengers may be young, child, or old age all can use this facility with their luggage. The passenger elevator lift price is very suitable for everyone. EME Elevators is a highly technical elevator company. They are introducing best lifting products and services on the basis of high technology.

# Panoramic Lift

Panoramic elevator is also called sightseeing elevator (or scenic elevator). Panoramic elevator is the basic element of architectural design. The panoramic elevator is a moving artwork in the building. The internal structure is rigorous and decent, and the appearance is full of passion. It not only allows passengers to enjoy the scenery during the operation of the elevator, but also combines the decoration style with the architectural style to give the building personality and vitality. They can be located in shopping malls and commercial centers, hotels, restaurants, and homes. There are variants of external and internal performance. It is suitable for various occasions showing architectural style and scenery.

# Round Panoramic Lift

EME Elevators is a specialist with luxurious panoramic round elevators, we provide quality material and warranty for this special lift.

We produce it with Machine room less and Hydraulic technology, as per site and customer demand. Its time taker to manufacture and expansive than normal lifts.

[Product Round Panoramic Lift →](#)

# Vacuum Lift

EME is providing a new technique of vacuum elevators. These elevators are very beneficial for home. Most of the users consider that having an elevator at home is just an extra expense of electricity. We sort out this issue through pneumatic vacuum elevators. These elevators are less electricity consumption products. It uses a small amount of electricity. These lifts use air pressure to lift and lower the cabin gently. We have a huge variety of these lifts for our customers. It is a very economical package of the elevator with quality and affordability. We provide all color combinations of vacuum home lift according to your home decor.

# Construction Hoist Lift

A construction hoist is considered a common requirement in the construction site of high-rise buildings that not only speeds up the movement of goods between the ground and upper floors but secures the safety of transportation as well.

We have one cage and two cage construction lift, carrying from 1 ton to 5 tons or more as per customer required.

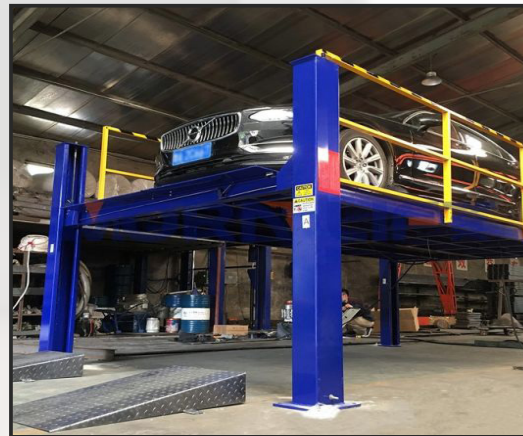

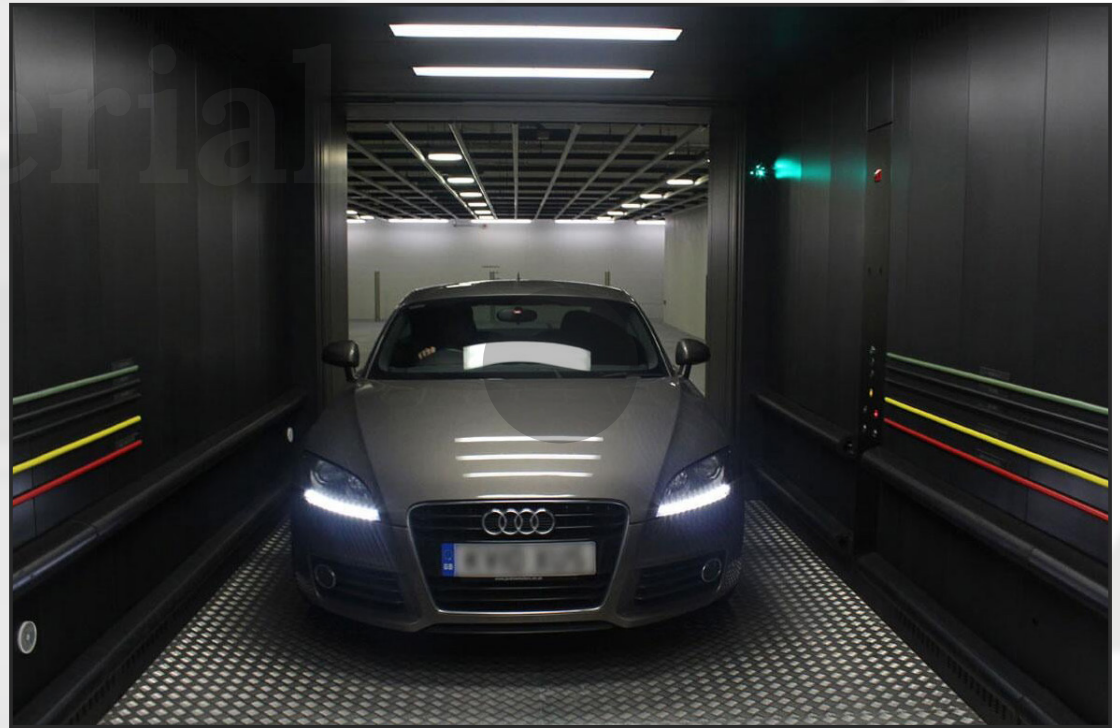

[Product Construction Hoist Lift →](#)

# Cargo/Material Lift

A goods lift (or cargo lift) is a machine to lift goods vertically in a safe way. Persons are not allowed on the lift, only for loading and unloading. There is one exception: a goods lift with an attendant (sometimes called a goods / person lift). These kinds of lifts require special safety measures. There are a lot of different types of goods lifts (or cargo lifts): small goods lifts, service lifts, kitchen lifts, tyre lifts, lifts in storage spaces, heavy duty goods lifts, goods lifts with a cage, car lifts, and many more types for any use.

# Food Lift/ Dumbwaiter Lift

A dumbwaiter is a small freight elevator or lift intended to carry food. Dumbwaiters found within modern structures, including both commercial, public and private buildings, are often connected between multiple floors..

[Product Food Lift/Dumbwaiter Lift →](#)

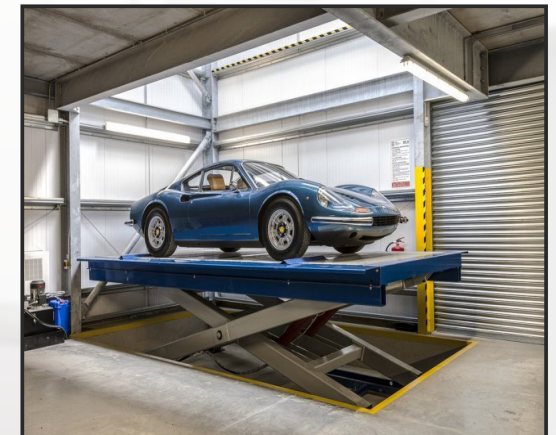

# Car Lift

A car elevator or vehicle elevator is an elevator designed for the vertical transportation of vehicles.

Car elevators are used to vertically transport vehicles inside buildings. The objective of these lifts is to increase the number of vehicles that can be parked in parking lots and parking garages. Where real estate is costly, these car parking systems can reduce overall costs by using less land to park the same number of cars. Vehicle lifts, which lift a car at its center of gravity, are used in garages and repair shops and are designed to allow access to a car's undercarriage for repair.

# Escalator

An escalator is a moving staircase which carries people between floors of a building or structure. It consists of a motor-driven chain of individually linked steps on a track which cycle on a pair of tracks which keep them horizontal.

Escalators are often used around the world in places where lifts would be impractical, or they can be used in conjunction with them. Principal areas of usage include department stores, shopping malls, airports, transit systems (railway/railroad stations), convention centers, hotels, arenas, stadiums and public buildings. Escalators have the capacity to move large numbers of people. They have no waiting interval (except during very heavy traffic). They can be used to guide people toward main exits or special exhibits and may be weatherproofed for outdoor use.

# Machine Room Less (MRL) Lift

A machine room-less (MRL) elevator does not have a separate room for housing the elevator's motor. The specially-designed motor is installed directly in the hoistway at the top of the shaft.

In many ways, an MRL elevator looks like a "normal" elevator. The lift may be a traction or hydraulic machine. The elevator will be moved on steel cord cables just like other elevators.

It's utilized a gearless traction machine located in the hoistway. The use of a counterweight assists the machine in turning the elevator sheave, which moves the cab through the hoistway. Most commonly seen in hotels, apartments, mixed-use buildings and commercial offices, MRL elevators can handle 2 to 25 stops.

[Product Machine Room Less Lift →](#)

# Machine Room (MR) Lift

A machine room is an area where the elevator drive unit, controller and main disconnect switches are located. Typically for residential elevators, a machine room will be located on the lowest landing as close as possible to the elevator hoist way.

The minimum recommended size is 5'-5" deep and 4'-6" wide shown in this plan. The dimensions allow for a safe working clearance around the electrical equipment required by the national electrical code or N.E.C. BEFORE constructing a machine room space the dimensions should be verified with current electrical, elevator and local building codes. The easiest way to verify current codes is to consult with your elevator contractor.

[Product Machine Room Lift →](#)

# Hydraulic Lift

Hydraulic lifts work on a basic principle: to go up, a pump pushes oil into the cylinder, pushing the piston (which pushes the lift car) up. To go down, the valve opens and oil is allowed to flow back into the reservoir, and is pushed back using the gravitational force of the lift car.

When the valve is closed, the oil can only go from the reservoir into the cylinder. When the valve is open, the oil can only flow from the cylinder back into the reservoir.

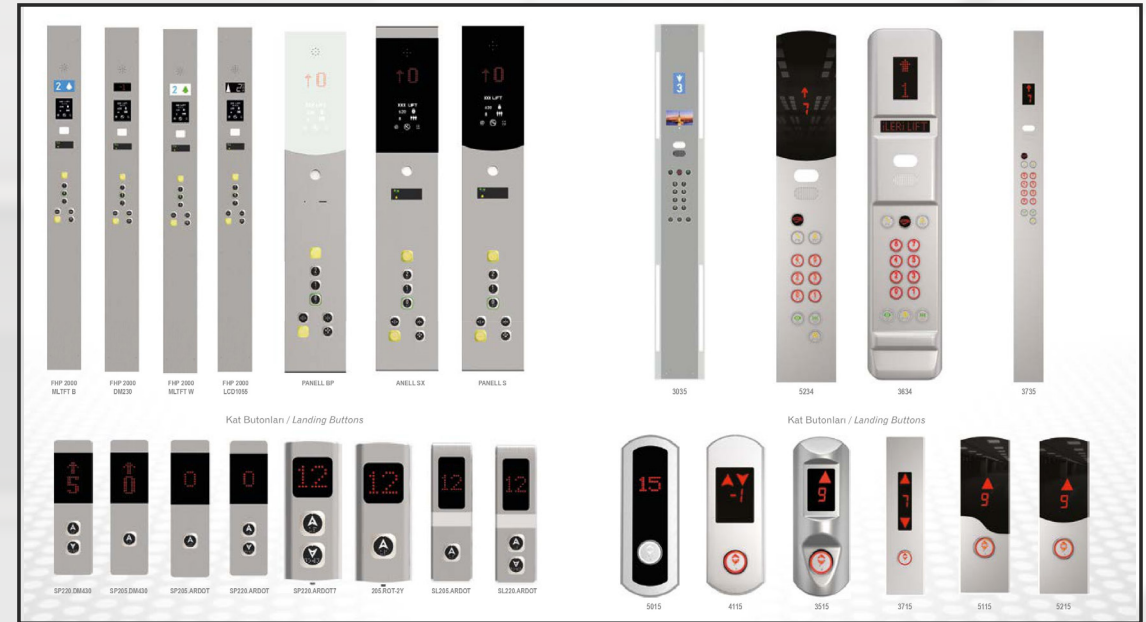

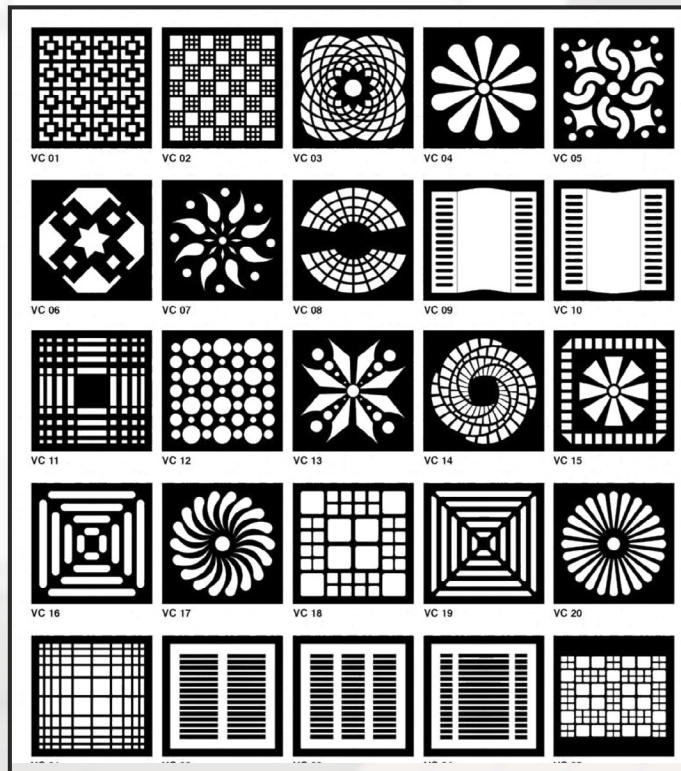

Usually a hydraulic lift will have a machine room, which will house the pump, fluid and motor, so you may need more space than expected. You can get machine-room-less (MRL) hydraulic lifts which generally house the machinery and such within the shaft, against the guides that run behind the lift, making them a more space-saving option.
